## **SharperBlade™ Introduces Three New Ways to Stay Sharp Year ‘Round**

*New Mower, Trimmer and Edger Blades Feature Ease of Use, Improved Safety, and Durability*

**LAS VEGAS, Nevada** -- SharperBlade, a U.S. designer and manufacturer of innovative lawn and garden care products has developed three blades that are quickly becoming the new standard for lawn and garden equipment. These blades are efficient, long lasting, money saving, safe and affordable. With these benefits there is no reason not to switch from the old fashioned products on the market.

SharperBlade consist of three products: Weed Whacker Blade, designed for string trimmer equipment, Edger Blade, and Lawn Mower Mulching Blade. All blades are made with ultra durable polymer imbedded with nylon at their cutting positions. As the blade rotates and cuts the vegetation, it slowly wears down, exposing new nylon. This creates a blade that is self-sharpening and maintenance-free. SharperBlades are as sharp on the first cut as on the last cut giving you months of great clean-cutting performance.

SharperBlade has created for homeowners and professionals the only alternative to steel blades and weed whacker string. Not only are the blades self-sharpening, allowing for a non-interruptive work session, but when used properly, the blades are non-damaging to the operator and their surrounding environment. SharperBlades will not damage your hardscape or spark - eliminating fire hazards that come with steel blades.

The SharperBlade Weed Whacker Blade is for people who are dissatisfied with the problems caused by nylon string. This hassle-free blade lets you trim weeds and edge lawn without stopping. Unlike nylon string, or other plastic attachments, that requires constant adjustment and replacement, the SharperBlade allows you to complete the job more easily than all other products. MSRP: \$24.99

The SharperBlade Edger Blade was developed for those who are bothered by the problems associated with steel blades. It's a maintenance-free blade that sharpens itself as it edges lawn without damaging your property or sprinkler heads. Unlike steel blades that chip concrete, brick, stone, and throw dangerous sparks, SharperBlade's spark-free composition allows you to complete the job without property damage. MSRP: \$34.99

The SharperBlade Lawn Mower Mulching Blade is for homeowners and professionals who want to do away with the maintenance hassles of steel blades. It too is a maintenance-free blade that sharpens itself while it cuts the lawn. Unlike steel blades that require repeated sharpening, SharperBlade allows you to avoid the hassles and dangers associated with sharpening steel blades. The Lawn Mower Blade will fit mower deck sizes from 17" to 22." It has "Trim-To-Fit Technology™"; simply shorten the polymer blade to fit the mower. The mower blade is designed to cut only vegetation. It will not cut through electrical cord, garden hose, and it is the only lawn mower blade that improves operator safety! MSRP: \$49.99

The simplicity and affordability of the patented SharperBlade products are unbeatable. SharperBlade products are available beginning January 1, 2006 at Ace Hardware, Orchard Supply Hardware, Sutherland Lumber, and other retailers across the country.
